## COLLECTION OF SAMPLES:

Blood samples: The sample of choice in all animals collected in EDTA (purple top tubes). 1 Tube / dog.

Buccal / cheek swabs: Can be used in small puppies. Before collecting the sample, make sure that the animal is not chewing any food or suckling. If the animal has been eating, let it drink water, or wash its mouth with water. Sample ONE animal at a time. Use 2 swabs to collect buccal cells from each animal. Label the swab envelope or container with the name / microchip number of the animal being sampled. Remove swab and rub the inside of the cheek firmly for 5-10 seconds but be careful not to injure the cheek. Wave the swab in the air for several seconds to air dry before inserting them back in the labelled envelope. Bacterial swabs may be used but must **not be placed in transport medium**.

**For Parentage Testing please complete the following:**

Dog ID		Mother ID	DNA Number	Father ID	DNA Number
